## MCU-Update

After you have downloaded and unzipped the update file, connect the Musway DSP device to your PC / laptop via USB. Then turn on the Musway DSP device. Make sure the software is properly connected to the device.

1. **Click on the wrench symbol above:**

2. **Click on in the follwing window on "Firmware Update":**

3. **Find the MCU update file in the corresponding folder that you previously saved on your PC / laptop.**

   IMPORTANT: Only select the folder that corresponds to the model number of your DSP device. Otherwise you could damage the DSP device.

4. **Select the corresponding MCU update file with the suffix "* .img" and confirm this with "Open".**

5. **The MCU update will now be installed.**

Wird geLaden, bitte den DSP nicht trennen oder ausschalten

Bitte warten, danke !

Cancel

IMPORTANT: Make sure that both devices are not switched off during the update process.
