# EISA IN-CAR MICRO AMPLIFIER 2026-2027

## Musway M4nano

EISA AWARD
Best Product 2026-2027
IN-CAR MICRO AMPLIFIER
Musway M4nano

The Musway M4nano was developed specifically with limited installation space in mind, combining the strengths of its predecessor, the M4, into a significantly more compact format. Thanks to efficient Class-D technology, it delivers 4 x 55 watts at 4 ohms and can be bridged to 200 watts—providing enough power to drive a subwoofer as well. Furthermore, the M4nano integrates an 8-channel DSP with six high-level and preamp inputs, along with four speaker and four preamp outputs. This enables a wide range of configurations, extending from a simple 4-speaker setup to an active front system with an external subwoofer amplifier. Complemented by Musway's intuitive, comprehensive software, as well as plug-and-play compatibility and compact dimensions, the M4nano proves to be an ideal solution for discreetly yet effectively enhancing the sound quality of any factory audio system.
